Acidic Disinfectant

A clear, colorless disinfectant. Effective against a wide range of bacteria, viruses and fungi encountered in intensive livestock husbandry, milk production and processing.

- Passes EN 1656. Kills bacteria within 15 seconds at a dilution of 1:50 at 100C.
- Passes EN 14476; effective against enveloped viruses, including Coronavirus.
- Helps to maintain the highest standards of hygiene.
- May be used at dilution rates of between 1:100 & 1:200 in cold water according to specific pathogens involved, as well as level of residual soiling encountered
- Fast acting formulation.
- Economical in use.
- Suitable in all water conditions.

General Livestock Protection:

This disinfectant may be used at dilution rates of between 1:100 and 1:200 in cold water according to specific pathogens involved, as well as level of residual soiling encountered at the point of use.

Poultry Protection:

Use between flocks, for sanitizing the drinking water system. Use at a dilution of 1:50 and allow to soak for 4-6 hours. Rinse the system thoroughly with potable water.

Cluster Dipping:

Use at dilution rates of between 1:50 and 1:200 in cold water (according to specific pathogens involved), to kill mastitis causing bacteria.

In-Place disinfection of processing plants:

For the disinfection of processing plants in the food and beverage industries, circulate at a dilution rate of 1:200 following effective cleaning using a suitable detergent. This product may also be used at a dilution rate of 1:200 as a combined detergent disinfectant for removal of protein films from milking machines.

For Coronavirus:

Clean surfaces with detergent prior to disinfection. Dilute 15 ml per 5 L water (1:333). Apply to surface with a clean cloth or mop and leave for 5 minutes. Rinse with potable water and allow to air dry.
